Protecting Your Patients

Has your scope been soaking long enough?

Up to 28% of reprocessed endoscopes still harbor culturable micro-organisms.1,2

We know you worry about cross-contamination from reprocessed endoscopes. And with good reason. Now you can help reduce the risk of cross-contamination in an easy, effective way. The Slide-On® EndoSheath® System provides:

- > A sterile, disposable sheath for flexible ENT scopes that provides a latex-free barrier between scope and patient
- > A proven effective microbial barrier to micro-organisms as small as 27 nanometers that is 100% leak-tested
- > Disposable channels that reduce the bioburden and cleaning concerns of traditional long channeled scopes

Clinical Research Reports:

Use of a high-quality, snugly fitting, sterile, disposable polyurethane sheath on a nasopharyngoscope during a clinical examination, combined with enzymatic detergent cleaning and disinfection with 70% ethanol, can provide a reliably decontaminated, patient-ready instrument, eliminating the need for high-level disinfection of endoscopes.3

Using an individually packaged disposable sterile sheath on a FNLP prevents microbes from adhering to the shaft of the scope, thus providing a reasonably safe method of avoiding the transmission of infection from one patient to the next patient when using an FNLP successively in multiple patients in an otolaryngology clinic.4

ENT Slide-On®

EndoSheath® System

The ENT Slide-On® EndoSheath® System is a sterile, microbial barrier for flexible endoscopes that provides a latex-free barrier between the scope and the patient. This easy-to-use system reduces patient contact with organic debris and staff exposure to hazardous chemicals.

An alternative to time-intensive chemical reprocessing, the EndoSheath System allows for quick scope turnaround creating more time for patients. Perform a range of office-based screening procedures, all with the convenience of EndoSheath technology.

Benefits of the EndoSheath® System

Enhanced Clinical Productivity

- > Enables office based TFL with biopsy and esophagoscopy vs. being performed in the OR.
- > Channeled sheaths turn a visual-only diagnostic device into a therapeutic device
- > Allows quick scope turnaround time by eliminating high-level disinfection between procedures

Enhanced Safety for Staff

> Eliminates frequent handling of hazardous chemicals

Improved Equipment Longevity

- > Causes less wear and tear on scope from chemical exposure
- > Lowers cost in repairs to scope
- > Reduces the need for backup scopes

Sterility

- > Offers a sterile, disposable alternative to high-level disinfection
- > Provides a proven effective barrier to 27 nanometers per FDA requirements and testing
- > Reduces concern for biofilm, bioburden, and issues of improperly disinfected devices

Basic Slide-On® EndoSheath® System

A sterile scope for each patient

- Proven effective barrier to micro-organisms as small as 27 nanometers
- Simplifies steps between cases and improves productivity
- Virtually eliminates staff exposure to hazardous germicides
- Prolongs the life of the scope by reducing chemical exposure
- 100% leak-tested: over 5 million procedures with no reported leaks or tears

All basic sheaths packaged 20 per box

Channeled EndoSheaths

For diagnostic and therapeutic procedures

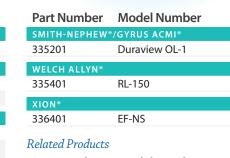

The Slide-On Channeled Sheath has the same features as the standard Slide-On EndoSheath System, plus a built-in 2.1 mm working channel. This allows an existing viewing-only scope to be used for multipurpose diagnostic and therapeutic procedures that traditionally require dedicated channeled ENT scopes.

- Enhance office productivity through increased utilization of existing ENT scopes
- Reduce the cleaning difficulty and reduce the concern of biofilm and bioburden in the channels by using a disposable working channel

All channeled sheaths and biopsy forceps are packaged 10 per box

Perform More Diagnostic Procedures IN OFFICE

- MORE UTILITY FROM YOUR EXISTING ENDOSCOPES
- MORE TIME FOR PATIENTS
- LESS CONTACT WITH ORGANIC DEBRIS AND MICROORGANISMS
- LESS EXPOSURE TO HAZARDOUS CHEMICALS
- LESS-COSTLY REPAIRS FOR YOUR SCOPE

Efficient and effective for in-office screening and diagnosis of esophageal disorders

The EndoSheath for TNE provides a sheath with a disposable channel, eliminating the need to clean traditional long channeled TNE scopes.
